

JF Term

A terminal that groups tabs by project

colored dot

divider

Detail view of the tab list

configure

Project A

Tab 1

creates a new tab in that project

x closes the tab

disorder
collapse

Projects are associated with a directory

Colored dot is used to convey information about the tab: blue subprocess active
grey at shell prompt

Outline around the dot in project dir or sub dir
conveys in project or not: (o) outside of project dir

clicking the dot

opens a tab menu: Move to Project B
Move to unsorted

if there's
a matching
project
otherwise
greyed out

Tabs can be reordered by drag and drop

Above unsorted there's a button for creating a new project
